Term	Definition
algorithm	A set of rules for problem-solving that computers follow
generative AI	A way for software to create new content based on user-provided input
GPT	Generative Pre-trained Transformer; A large language model that uses software developed by a person or machine to create output in the form of text, audio, and visuals
LLM	Large language model; A complex algorithm derived from a massive volume of data on which the model is trained
neural network	A web of connected nodes (data points) that closely mimics the human brain
responsible AI	The practice of ensuring that AI is developed and used with positive intentions and fairness to everyone impacted by it
